Mr. Daniel E. Averett
Sanitary Engineer
Air-Water Pollution Commission
Jackson, Miss.

Dear Mr. Averett:

There were no planned discharges from the plant during the month of July. A small seepage has developed in the holding pond and we will try to correct it. We are unable to detect chromium in Hanging Kettle Creek (less than 1 ppm).

The cooling water from the cells has been diverted from the reuse pond as you suggested. We may have to occasionally divert some of this back to maintain a level in this pond. Condensate not equal to evaporation in dry weather.

Sincerely,

Denver V. Harris

Denver V. Harris
President
